Vibrating Bar

With the vibrating bar we end the strain on the knees, waist, back and shoulders of the craftsman who works the concrete! Now you can lay the concrete easily, quickly and mostly restlessly!

Description

- The vibratory bar is lightweight and easy to use and is used for the concrete layer in construction.
- Maximum performance is achieved as well as excellent construction of industrial floors.
- The machine is located at the top, underneath the handles so that it is better protected from the concrete
- The bar is entirely made of aluminum with a very low weight.
- The new design of the tread with the curvature at the vertical fixed helps to gather and fold the additional concrete.
- It is very easy to handle with the two anti-vibration handles.
- Provides the required vibration for the perfect layer of concrete.
- Ability to change bars.

The bars are offered in four sizes:

- 1,83m / 6’
- 44m / 8’
- 05m /10’
- 66m /12’
